

Lucas Gontijo de Moraes

AI Automation Developer | n8n Specialist & Low-Code Orchestration Expert

Phone: +55 62 98537-2793 Github: /Luucassgontijo Email: lucas.gontijo04@gmail.com

ABOUT ME

AI Automation Developer & n8n Specialist with **5+ years** development experience and **3+ years specialized expertise** in n8n workflow automation, advanced data analysis, and low-code orchestration tools. Expert in building sophisticated automation systems integrating email platforms, CRM systems, and calendar platforms through Python API development and enterprise workflow orchestration. Specialized in creating comprehensive dashboards and monitoring tools for pipeline reliability and performance optimization. Currently leading automation infrastructure for Brazil's national digital health platform, serving **1.000.000+ monthly users** through advanced n8n orchestration and data-driven monitoring systems. Proven expertise in cross-platform integration, automated reporting, and building scalable low-code solutions that deliver measurable business value across healthcare, real estate, and e-commerce industries. Strong focus on data analysis workflows, performance monitoring, and enterprise automation architecture with cloud integration capabilities.

CORE COMPETENCIES

n8n & Low-Code Orchestration: Expert-level n8n workflow development, complex automation orchestration, low-code platform integration, enterprise workflow architecture, automated pipeline monitoring, and performance optimization for scalable business processes

Data Analysis & Business Intelligence: Advanced data analysis workflows, automated reporting systems, business dashboard creation, data pipeline orchestration, performance monitoring tools, and KPI tracking through integrated analytics platforms

Email & Communication System Integration: Outlook/Exchange API integration, Gmail automation, Slack workflow orchestration, email system automation, communication tool connections, and cross-platform messaging automation

CRM & Calendar Platform Automation: CRM system integration, Google Calendar API orchestration, calendar platform synchronization, customer workflow automation, lead management systems, and automated scheduling solutions

Python & API Development: Python automation scripting, API integration development, webhook orchestration, custom function creation, automated testing protocols, and enterprise integration solutions with comprehensive monitoring

Cloud & AI Integration: AWS services integration, serverless automation, AI API implementation (OpenAI/Claude), intelligent document processing, and cloud-native workflow optimization

Languages: English (Fluent), Portuguese (Native), Spanish (Working Proficiency)

PROFESSIONAL EXPERIENCE

Lead Data Analyst & Low-Code Orchestration Engineer 2023 - Present

WarriorBabe - United States (Remote)

Lead development of advanced n8n automation orchestrations integrating email systems, CRMs, and calendar platforms for enterprise clients. Built comprehensive data analysis workflows using Python and low-code tools, creating automated dashboards and monitoring systems for pipeline reliability and performance tracking. Develop API integrations with cloud services and business platforms, orchestrating complex communication workflows and business process automation.

Full-Stack AI & Automation Developer 2023 - 2023

Harmony - Tennessee, United States (Remote)

Built sophisticated n8n workflow automation systems with API integrations connecting Stripe, Slack, Gmail, and Google Calendar. Implemented AI-powered processes using OpenAI/Claude APIs for payment automation and intelligent document processing. Created custom business dashboards and automated reporting solutions with measurable operational efficiency gains.

Automation & Data Engineer 2023 - Present

DevScouter - Los Angeles, California (Remote)

Designed complex n8n automation workflows for enterprise clients across healthcare, real estate, and e-commerce. Built comprehensive systems connecting CRM platforms, payment systems, and communication tools through API integrations. Implemented AI tool integration using OpenAI/Claude APIs for document processing and automated business reporting with GitHub version control.

Co-Founder & Full-Stack Automation Lead 2023 - 2023

Veridian - Brazil (Remote)

Led prompt engineering strategy and AI integration for business automation, specializing in legal AI systems and intelligent document generation. Architected custom prompt chains and RAG systems for automated SDR agents and nurturing workflows. Built comprehensive prompt libraries with optimization for professional legal communication and AI agent training protocols.

AI & Automation Consultant 2023 - 2023

Apollo Company - Brazil (Remote)

Prototyped AI-driven automation workflows with advanced prompt engineering using GPT-4 and Claude APIs. Built custom prompt chains for document processing and intelligent response generation. Implemented Microsoft Copilot integration across enterprise environments with SOP automation and comprehensive AI testing frameworks with error correction protocols.

Process Automation & Data Analyst 2022 - 2025

UFG Institute of Informatics - Brazil (Remote)

Deployed AI-powered automation tools and prompt engineering systems for enterprise workflow optimization. Built advanced LLM integration systems with custom prompt libraries and intelligent response generation. Implemented Microsoft Copilot training systems across Teams, SharePoint, and Outlook with SOP automation and scalable AI workflow architectures.

EDUCATION & CERTIFICATIONS

Bachelor's Degree in Software Engineering 2023

Federal University of Goiás UFG

Bachelor's Degree in Electrical Engineering 2022

Federal University of Goiás UFG

IBM AI Engineer Certification 2025

IBM

Computer Science and Python Programming 2023

MITx
